# Preamble

To meet the challenge of ensuring excellence and NEP 2020 policy in engineering education, the issue of quality needs to be addressed, debated, and taken forward systematically. Accreditation is the principal means of quality assurance in higher education. The major emphasis of the accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Science and Technology (in particular Engineering) of the University of Mumbai has taken the lead in incorporating the philosophy of NEP 2020 education in the process of curriculum development.

The second-year engineering course is a core training program to impart scientific and logical thinking training to learners in general, with a choice of course selection from the program core course, multidisciplinary minor, and vocational skill-enhanced course. Simultaneously, the objectives of NEP 2020 demand nurturing the core program and skills required for the Civil Engineering Branch of engineering in the learner. Keeping this in view, a pool of courses is offered in Core Courses covering fundamentals required to understand core and modern engineering practices and emerging trends in technology. Considering the shift in pedagogy and the convenience of a stress-free learning process, a choice-based subject pool is offered in the coursework under the heads of Civil Engineering in Engineering for open electives and multidisciplinary minor courses in the third and fourth semesters. Essentially, to give a glimpse of trends in the industry under vocational and enhanced skill practices, the pool is offered to nurture and develop creative skills in contemporary industrial practices. Criteria met in the structure is the opportunity for learners to choose the course of their interest in all disciplines.

Program Core Course Cover Civil Engineering core courses. Also, OE and MDM where a pool of subjects are given for selection. Considering the present scenario, diverse choices need to be made available to fulfill the expectation of a learner to aspire for a career in the field of current trends of Technology and interdisciplinary research. Ability enhancement can be achieved in Undergraduate training by giving an objective viewpoint to the learning process and transitioning a learner from a rote learner to a creative professional. For the purpose Design Thinking is introduced in the Fourth Semester to orient a journey learner to become a skilled professional. Considering the NEP-2020 structure of award of Certificate & Diploma at multiple exit-point pools of Vocational skills is arranged for giving exposure to the current Industry practices.

The faculty resolved that course objectives and course outcomes are to be clearly defined for every course so that all faculty members in affiliated higher education institutes understand the depth and approach of the course to be taught, which will enhance the learner's learning process. NEP 2020 grading system enables a much-required shift in focus from teacher-centric to continuous-based learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation, which will enhance the quality of education. Credit assignment for courses is based on a 15-week teaching-learning process for NEP 2020, however, the content of courses is to be taught in 12-13 weeks, and the remaining 2-3 weeks are to be utilized for revision, tutorial, guest lectures, coverage of content beyond the syllabus, etc.

There was a concern that in the present system, the second-year syllabus must not be heavily loaded to the learner and it is of utmost importance that the learner entering into the second year of an engineering course should feel at ease by lowering the burden of syllabus and credits. This is necessary for a learner to get accustomed to the new environment of a college and to create a bond between the teacher and the learner. The present curriculum will be implemented for the Second Year of Engineering from the academic year 2025-26. Subsequently, this system will be carried forward for Third Year and Final Year Engineering in the academic years 2026-27, and 2027-28, respectively.

### Semester IV

Course Code	Course Name	Teaching Scheme (Contact Hours)			Credits Assigned			
		Theory	Pract.	Tut.	Theory	Pract.	Tut.	Total
2094111	Applied Mathematics for Civil Engineering-II	2	-	1	2	-	1	3

Course Code	Course Name	Theory					Term work	Pract / Oral	Total
		Internal Assessment			End Sem Exam	Exam Duration (in Hrs)			
		Test 1	Test 2	Total					
2094111	Applied Mathematics for Civil Engineering-II	20	20	40	60	2	--	--	100

#### Pre-requisite:

- Applied Mathematics-I,
- Applied Mathematics-II,
- Applied Mathematics for Civil Engineering-I.

#### Course Objectives:

1. To study the concept of Vector calculus & its applications in engineering.
2. To study Line and Contour integrals and expansion of complex valued function in a power series.
3. To familiarize with the concepts of statistics for data analysis.
4. To acquaint with the concepts of probability, random variables with their distributions and expectations.
5. To familiarize with the concepts of probability distributions and sampling theory with its applications.

#### Course Outcomes:

On completion of the course students will be able to:

1. Apply the concept of Vector calculus to evaluate line integrals, surface integrals using Green's theorem, Stoke's theorem & Gauss Divergence theorem
2. Use the concepts of Complex Integration for evaluating integrals, computing residues & evaluate various contour integrals.
3. Apply the concept of Correlation, Regression and curve fitting to the engineering problems in data science.
4. Illustrate understanding of the concepts of probability and expectation for getting the spread of the data and distribution of probabilities.
5. Apply the concept of probability distribution to engineering problems & Testing hypothesis of small samples using sampling theory.
6. Apply the concept of parametric and nonparametric tests for analysing practical problems

## Detailed Syllabus

Module	Course Module / Contents		Hrs	CO
1	<b>Vector Calculus</b>		05	CO1
	1.1	Solenoidal and irrotational (conservative) vector fields.		
	1.2	Line integrals – definition and problems.		
	1.3	Green’s theorem (without proof) in a plane, Stokes’ theorem (without Proof) only evaluation problems, Gauss’ Divergence theorem (without proof) and problems (only evaluation).		
	<b>Self- Learning Topics:</b> Identities connecting Gradient, Divergence and Curl, Angle between surfaces. Verifications of Green’s theorem, Stoke’s theorem & Gauss- Divergence theorem, related identities & deductions.			
2	<b>Complex Integration</b>		05	CO2
	2.1	Line Integral, Cauchy’s Integral theorem for simple connected and multiply connected regions (without proof), Cauchy’s Integral formula (without proof).		
	2.2	Taylor’s and Laurent’s series (without proof).		
	2.3	Definition of Singularity, Zeroes, poles of $f(z)$ , Residues, Cauchy’s Residue Theorem (without proof)		
	<b>Self-learning Topics:</b> Application of Residue Theorem to evaluate real integrations.			
3	<b>Statistical Techniques</b>		04	CO3
	3.1	Karl Pearson’s Coefficient of correlation (r) and related concepts with problem.		
	3.2	Spearman’s Rank correlation coefficient (R) (Repeated & non- r e p e a t e d ranks problems)		
	3.3	Lines of regression.		
	<b>Self-learning Topics:</b> Covariance, fitting of exponential curve, Fitting of first and second degree curves.			
4	<b>Probability Theory</b>		04	CO4
	4.1	Discrete and Continuous random variables, Probability mass and density function, Probability distribution for random variables,		
	4.2	Expectation, Variance, Co-variance.		
	4.3	Moments, Moment generating functions, (Four moments about the origin & about the mean).		
	<b>Self- learning Topics:</b> Conditional probability, Total Probability and Baye’s Theorem. Properties variance and covariance.			
5	<b>Probability Distribution and Sampling Theory-I</b>		05	CO5
	5.1	Probability Distribution: Poisson and Normal distribution		
	5.2	Sampling distribution, Test of Hypothesis, Level of Significance, Critical region, One-tailed, and two-tailed test, Degree of freedom.		

Module	Course Module / Contents		Hrs	CO
	5.3	Students' t-distribution (Small sample). Test the significance of single sample mean and two independent sample means and paired t- test)		
	<b>Self -learning Topics:</b> Test of significance of large samples, Proportion test, Survey based project.			
6	<b>Sampling theory-II</b>		04	CO6
	6.1	Chi-square test: Test of goodness of fit and independence of attributes (Contingency table).		
	6.2	Analysis of variance: F-test (significant difference between variances of two samples)		
	<b>Self- learning Topics:</b> ANOVA: One way classification, Two-way classification (short- cut method), Yate's Correction.			

### Text Books:

1. Higher Engineering Mathematics, Dr. B. S. Grewal, Khanna Publication
2. Advanced Engineering Mathematics, Erwin Kreyszig, Wiley Eastern Limited,
3. Advanced Engineering Mathematics, R. K. Jain and S. R. K. Iyengar, Narosa publication,

### References:

1. Vector Analysis, Murray R. Spiegel, Schaum Series
2. Complex Variables and Applications, Brown and Churchill, McGraw-Hilleducation
3. Probability Statistics and Random Processes, T. Veerarajan, Mc. GrawHilleducation.

### Online References:

Sr. No.	Website Name
1.	NPTEL (National Program on Technology Enhanced Learning) Website: <a href="https://nptel.ac.in/">https://nptel.ac.in/</a> Relevant Courses

### Assessment:

#### Internal Continuous Assessment: 40%

#### Internal Assessment Test (IAT) for 20 marks each:

IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

### End Semester Theory Examination:

#### ➤ Question Paper Format:

- Question Paper will comprise a total of **six questions each carrying 15 marks**
- **Q.1** will be **compulsory** and should **cover the maximum contents of the syllabus**
- Remaining questions will be mixed in nature (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules).
- A total of **four questions** needs to be answered

Course Code	Course Name	Teaching Scheme (Contact Hours)			Credits Assigned

### Rationale:

As it is always said “well begun is half done”. All civil engineering projects such as buildings, roads, bridges, railways, airports, dams, water treatment plants, sewage treatment plants begin with surveying. Knowledge of surveying is thus fundamental and very useful to all civil engineers. In this course, the students are well informed about the principles and methods of surveying. The students are made conversant with various instruments which are used in the field to take measurements for preparation of drawings. The course introduces the advancements in instruments and methods of surveying. The study deals with the methods of computing land areas and volume of earthworks. The course also covers horizontal and vertical curves.

### Course Objectives:

The Student will be able to learn:

1. The basic principles and classification of surveying.
2. Various methods of measurements in surveying.
3. The appropriate techniques of surveying and skills of collecting field data for preparing drawings.
4. Advancements in instruments and methods of surveying.
5. The methods of computing areas and volumes using the site specific data for various purposes.
6. The setting out techniques of curves.

### Course Outcomes:

On completion of the course students will be able to:

1. Apply the principles of surveying and field procedures for linear and angular measurements including legal aspects.
2. Use various methods for levelling and contouring.
3. Calculate precise angles of traverse and balancing using various methods
4. Explain the advancements in surveying instruments and methods
5. Calculate the area of land and volume of earthwork
6. Calculate the data require for setting out simple circular curves

## Detailed Syllabus

Module	Course Module / Contents		Hours	CO
1	<b>Introduction</b>		6	CO1
	1.1	Introduction to Survey of India Department; Department of Registration and Stamps, Maharashtra. Role of revenue department in maintaining survey records, introduction to local survey terminologies like tehsildar, 7/12 utara, namuna 8, etc.		
	1.2	Chaining, Ranging and offsetting: Definitions, Principles, Instruments required, Obstacles, conventional signs and symbols.		
	1.3	Bearings – Different types, dip, declination and local attraction, compass traversing		
2	<b>Levelling and Contouring</b>		8	CO2
	2.1	Definitions, basic terms, types of instruments-dumpy level and Auto level, principal axes of dumpy level, temporary and permanent adjustments		
	2.2	Booking and reduction of levels, plane of collimation (HI) and rise-fall methods, computation of missing data, distance to the visible horizon, corrections due to curvature and refraction, reciprocal levelling, Numerical problems		
	2.3	Differential levelling, profile levelling, fly levelling, check levelling, precise levelling, sources of errors, difficulties in levelling work, corrections and precautions work in levelling		
	2.4	Contouring: terms, contour, contouring, contour interval, horizontal equivalent Direct and indirect methods of contouring, interpolation of contours, uses of Contours and characteristics of contour lines. Grade contour		
3	<b>Theodolite Surveying</b>		8	CO3
	3.1	Various parts and axes of transit, technical terms, temporary and permanent adjustments of a transit, measurement of horizontal and vertical angles, Methods of repetition and reiteration.		
	3.2	Different methods of running a theodolite traverse, Latitudes and departures, rectangular coordinates, Traverse adjustments by Bowditch's, transit and Modified transit rules, Gales Traverse Table, Numerical Problems.		
	3.3	Miscellaneous use of theodolite for various works such as prolongation of a straight line, setting out an angle, bearing measurements. Omitted measurements, Problems in using theodolite traversing, errors in theodolite traversing.		
4	<b>Indirect and Advanced Methods of Measurement</b>		7	CO4
	4.1	Tacheometry-Principle, Objective, Suitability and different methods of tacheometry, Stadia formula, Radial contouring, numerical on stadia method only		

Module	Course Module / Contents		Hours	CO
	4.2	Electronic Distance Measurement: Working Principles, types, applications in surveying		
	4.3	Total Station- Working Principles, applications in surveying		
	4.4	Introduction to GPS, GIS and Remote Sensing		
5	<b>Plane Table Surveying, Areas and Volumes</b>		5	CO5
	5.1	Definition, principle, accessories required for plane table surveying, merits and demerits, temporary adjustments, Different methods of plane table surveying		
	5.2	Areas: Area of an irregular figure by trapezoidal rule, average ordinate rule, Simpson's 1/3 rule, various coordinate methods. Planimeter: types including digital planimeter, area of zero circle, uses of planimeter.		
	5.3	Volumes: Computation of volume by trapezoidal and prismoidal formula, volume from spot levels, volume from contour plans.		
6	<b>Curves</b>		5	CO6
	6.1	Horizontal Curves-Definitions of different terms, necessity and types of curves. Methods of setting out Simple circular curves- linear methods and Angular methods (Numericals on simple circular curves only)		
	6.2	Introduction to Vertical curves – Definitions, geometry and types.

2094113	Structural Analysis	20	20	40	60	2	--	--	100

### Rationale:

This syllabus outlines a comprehensive course on structural analysis, covering various aspects related to the behaviour of structures subjected different loading. It aims to equip students with the knowledge and skills necessary to analyze and design complex structures. Different components of civil engineering structures are subjected to various force systems and their combinations. For designing the components, these are analyzed for their response. The structural systems are determinate or indeterminate and so there are different analysis methods. These will be learnt in this course. Their application on solids and mechanisms, the action of force systems is studied and further extended in this subject. Learners will learn to apply these to the analysis of various members of structural systems such as beams, trusses, portal frames. These analyses will further be used while designing Steel and RCC structures.

### Course Objectives:

1. To introduce and familiarize students with the concepts of slope, deflection, strain energy, and virtual work in statically determinate structures.
2. To enable students to construct and use influence line diagrams for structural analysis and calculate shear forces and bending moments under different loading conditions, including rolling loads.
3. To develop an understanding of determinate and indeterminate structures, including material behaviours, and methods to assess determinacy and indeterminacy.
4. To equip students with the ability to analyse indeterminate structures using force methods.
5. To equip students with the ability to analyse indeterminate structures using displacement methods
6. To provide knowledge of plastic analysis techniques and enable students to determine collapse loads for beams using static and kinematic methods.

### Course Outcomes:

1. Classify structures into determinate and indeterminate categories, considering their static and kinematic behaviour, material properties (linear and non-linear), and geometric non-linearity.
2. Apply analytical methods to calculate slopes and deflections in statically determinate beams, rigid jointed frames, and pin-jointed trusses to solve real-world structural problems.
3. Construct and interpret influence line diagrams to evaluate the criteria for maximum shear force and bending moment under rolling loads.

4. Analyze indeterminate structures by applying force methods to evaluate structural behaviour.
5. Apply displacement methods to analyze indeterminate structures and evaluate their internal forces and deformations under various loading conditions.
6. Evaluate the collapse load of single and multiple-span beams by applying plastic analysis techniques

Prerequisite: Applied Mathematics, Engineering Mechanics and Mechanics of Solids

### Detailed Syllabus

Module	Course Module / Contents		Hours	CO Mapping
1	<b>Determinate and Indeterminate Structures.</b>		03	CO1
	1.1	Types of structures occurring in practice and their classification, Linear and non-linear behaviour of materials, geometric non-linearity.		
	1.2	Static and Kinematic determinacy and indeterminacy of structures.		
2	<b>Slope and Deflections in Statically Determinate Structures</b>		08	CO2
	2.1	Concept of Strain Energy, Slope and deflection in beams, Principle of Superposition, Principle of Virtual work, Castigliano's theorems, Betti's theorem and Maxwell's reciprocal theorem.		
	2.2	Macaulay's Method, Moment Area Method, Application of Unit Load Method for calculating slope and deflection for rigid jointed frames and Pin jointed truss.		
3	<b>Rolling Loads and Influence Line Diagrams</b>		06	CO3
	3.1	Influence lines for support reactions, shear force and bending moment at a section for a cantilever, simply supported and overhanging beams without internal hinges.		
	3.2	Determination of S.F. and B.M. at a section, Criteria for maximum shear force and bending moment, Absolute maximum shear force and bending moment under rolling loads (UDL and series of point loads) for simply supported girder.		
4	<b>Analysis of indeterminate structures by Force methods.</b>		08	CO4
	4.1	Clapeyron's theorem of three moments to fixed beam and continuous beam.		
	4.2	Flexibility coefficients and their use in formulation of compatibility equations. Application of flexibility method to propped cantilevers, fixed beams, continuous beams, and Simple rigid jointed frames. (Degree of static indeterminacy not more than 3).		
5	<b>Analysis of indeterminate structures by Displacement Methods</b>		11	CO5
	5.1	Introduction to the concept of slope deflection equation. Stiffness coefficients for prismatic members and their use for formulation of equilibrium equations.		
	5.2	Application of direct stiffness method to indeterminate beams & simple rigid jointed frames (only single		

		translation degree of freedom including the effect of support settlement and kinematic indeterminacy not more than 3)		
	5.3	Moment distribution method: Application to indeterminate beams & simple rigid jointed frames (only single translation degree of freedom including the effect of support settlement and Kinematic indeterminacy not more than 3)		
6	<b>Plastic Analysis of Structures.</b>		06	CO6
	6.1	Plastic analysis of structures: Introduction to plastic analysis, the concept of a plastic hinge, plastic moment carrying capacity, shape factor.		
	6.2	Static and kinematic method of plastic analysis. Determination of collapse load for single and multiple span beams.		

### Text Books:

#### Lab Objectives:

The students will be able to learn:

1. Various surveying instruments, their least counts, various parts and suitable uses.
2. Methods of measurements in the field.
3. Skills for collecting, recording and analysing the field data.
4. Advanced instruments and methods.
5. First hand practical experience by receiving field exposure to collect site specific data.
6. Setting out techniques.

#### Lab Outcomes: Student will be able to

1. Perform basic linear and angular surveying using chain, cross-staff, and prismatic compass to determine bearings and compute angles
2. Conduct leveling operations including simple and compound leveling to measure elevation differences accurately
3. Measure horizontal and vertical angles using theodolites and apply tachometry for computing heights and distances.
4. Utilize advanced surveying instruments such as total stations for precise distance measurement and data collection.
5. Apply graphical and computational methods in surveying through Plane Table Surveying and planimeter-based area measurement.
6. Set out curves and alignments using Rankine's method for practical field applications in road and railway projects.

2094115	Structural Analysis Lab	--	--	--	--	25	25	50

#### Lab Objectives:

1. To develop an in-depth understanding of structural components by considering the degree of indeterminacy.
2. To compute the distribution of shear stress, flexural (bending) stress and twisting moment across the cross section of structural members
3. To learn methods for evaluating rotation and displacement of statically determinate structure.
4. To study the concept of Influence Line Diagrams and rolling loads.
5. To analyse the indeterminate structures using Force and Displacement methods.
6. To study Plastic Analysis.

#### Lab Outcomes: Student will be able to

1. Classify structural components and evaluate their degree of indeterminacy based on span, loading, support conditions, etc.
2. Determine the rotation and displacement of statically determinate structures using different theorems and principles.
3. Construct and interpret influence line diagrams to analyse the effects of rolling loads on statically determinate structures
4. Analyse indeterminate structures using force Methods and displacement Methods.
5. Apply knowledge of plastic analysis by evaluating collapse load and Plastic moments.
6. To comprehend substantial conclusions by conducting various test on materials.

2094411	Computer Aided Architectural Planning, and Building Design (Capstone Mini-Project)	--	--	--	--	50	25	75

#### Lab Objectives:

1. To develop a comprehensive understanding of the principles, bye laws and techniques for architectural design of residential and public buildings
2. To apply building design and drawing skills to create functional, aesthetically pleasing, and sustainable building solutions for a variety of projects
3. To proficiently use CAD software for creating accurate 2D architectural drawings, including plans, elevations, sections etc.
4. To develop detailed building services drawings such as plumbing, electrical and HVAC using CAD software.
5. To generate 3D architectural drawings using CAD software.
6. To effectively utilize Building Information Modeling (BIM) software to create, manage, and visualize complex building projects.

#### Lab Outcomes:

##### Students will be able to:

- 1) Demonstrate a comprehensive understanding of architectural design principles, bye-laws, and techniques, as applied to residential and public buildings.
- 2) Apply architectural design principles to create functional, aesthetically pleasing, and sustainable building solutions for various project types.
- 3) Create accurate 2D architectural drawings, including plans, elevations, and sections using CAD software.
- 4) Apply their knowledge of building services to create detailed 2D drawings for plumbing, electrical, and HVAC systems using CAD software.
- 5) Create 3D architectural models using AutoCAD software to visualize and analyze building designs.
- 6) Understand effectively use of BIM software to create, manage, and visualize complex building projects, evaluating the impact of design decisions on various project parameters.

**Prerequisite:** Familiarity of various building elements, basic of drawing 2D shapes and perspectives.

### Assessment :

**Term Work:** Term Work shall consist of drawings based on the above list.

**Term Work Marks:** 50 Marks based on distribution below:

15 Marks – Full Imperial Drawing sheets

20 Marks - CAD prints

10 Marks - BIM outputs

5 Marks - Attendance

**Practical & Oral Exam:** 25 Marks based on distribution below  
10 Marks – Written test based on syllabus.  
10 Marks - Plotting based on the practicals. (2 hours in batches).  
05 Marks - Oral exam based on syllabus.

# Vertical – 5

Course Code	Course Name	Teaching Scheme (Contact Hours)			Credits Assigned			
		Theory	Pract.	Tut.	Theory	Pract.	Tut.	Total
2994511	Business Model Development	-	2*+2	-	-	2*+2	-	2

Course Code	Course Name	Theory					Term work	Pract / Oral	Total
		Internal Assessment			End Sem Exam	Exam Duration (in Hrs)			
		Test 1	Test 2	Total					
2994511	Business Model Development	--	--	--	--	--	50	--	50

**Note:** \* Two hours of practical class to be conducted for full class as demo/discussion/theory.

### Lab Objectives:

1. To introduce a learner to entrepreneurship and its role in economic development.
2. To familiarize a learner with the start-up ecosystem and government initiatives in India.
3. To explain the process of starting a business.
4. To familiarize a learner with the building blocks of a business.
5. To teach a learner to plan their own business with the help of Business Model Canvas.
6. To teach a learner to have financial plan for a business model.

### Lab Outcomes:

The learner will be able to:

1. Discuss the role of entrepreneurship in the economic development of a nation and describe the process of starting a business.
2. Describe start-up ecosystems in Indian and global context.
3. Identify different types of business models.
4. Identify customer segments, channels and customer relationship components for a particular business.
5. Identify key activities, key partners and key resources for a particular business.
6. Develop a financial plan for a business with the help of cost structure and revenue model.

### DETAILED SYLLABUS:

#### Prerequisite:

Basic Design Thinking principles

Module	Course Module / Contents		Hours	LO Mapping
1	<b>Introduction to Entrepreneurship</b>		04	LO1, LO2
	1.1	Definition, the role of entrepreneurship in the economic development, the entrepreneurial process		
	1.2	Women entrepreneurs, Corporate entrepreneurship, Entrepreneurial mindset		

	<b>Self-learning Topics:</b> Case studies: Henry Ford <a href="https://www.thehenryford.org/docs/default-source/default-document-library/default-document-library/henryfordandinnovation.pdf?sfvrsn=0">https://www.thehenryford.org/docs/default-source/default-document-library/default-document-library/henryfordandinnovation.pdf?sfvrsn=0</a> The Tatas: How a Family Built a Business and a Nation by Girish Kuber, April 2019, Harper Business		
2	<b>Entrepreneurship Development</b> 2.1 Types of business ownerships: Proprietorship, Public and Private Companies, Co-operative businesses 2.2 Micro, Small and Medium Enterprises (MSME): Definition and role of MSMEs in economic development		05  LO2, LO3, LO4
3	<b>Start-up financing</b> 3.1 Cost and revenue models, Sources of start-up fundings: Angel investors, Venture capitalists, Crowd funding, Government schemes for start-up funding <b>Self-learning Topics:</b> Successful business pitching		04  LO2, LO3, LO4, LO5
4	<b>Intellectual Property Rights (IPR)</b> 4.1 Types of IPR: Patents, trademarks and copyrights, Patent search and analysis 4.2 Strategies for IPR protection, Ethics in technology and innovation		04  LO2, LO3, LO4
5	<b>Business Model Development</b> 5.1 Types of business models, Value proposition, Customer segments, Customer relationships, Channels, Key partners, Key activities, Key resources, Prototyping and MVP <b>Self-learning Topics:</b> The Art of the Start 2.0: The Time-Tested, Battle-Hardened Guide for Anyone Starting Anything by Guy Kawasaki		04  LO3, LO4, LO5, LO6
6	<b>Digital Business Management</b> 6.1 Digital Business models (Subscription, Freemium <i>etc</i> ) 6.2 Digital marketing: Search Engine Optimization (SEO), Search Engine Marketing (SEM), Social media and influencer marketing 6.3 Disruption and innovation in digital business <b>Self-learning Topics:</b> Case study: Airbnb <a href="https://www.prismetric.com/airbnb-business-m">https://www.prismetric.com/airbnb-business-m</a>		04  LO2, LO3

#### Textbooks:

1. Entrepreneurship: David A. Kirby, McGraw Hill, 2002
2. Harvard Business Review: Entrepreneurs Handbook, HBR Press, 2018
3. Business Model Generation; Alexander Ostlewalder and Yves Pigneur, Strategyzer, 2010
4. E- Business & E- Commerce Management: Strategy, Implementation, Practice – Dave Chaffey, Pearson Education

**Reference books:**

1. Entrepreneurship: New venture creation by David Holt, Prentice Hall of India Pvt. Ltd.
2. E- Business & E- Commerce Management: Strategy, Implementation, Practice – Dave Chaffey, Pearson Education

Sr. No.	Website Name
1.	Entrepreneurship by Prof. C Bhaktavatsala Rao <a href="https://onlinecourses.nptel.ac.in/noc20_mg35/preview">https://onlinecourses.nptel.ac.in/noc20_mg35/preview</a>
2.	Innovation, Business Models and Entrepreneurship by Prof. Rajat Agrawal, Prof. Vinay Sharma <a href="https://onlinecourses.nptel.ac.in/noc21_mg63/preview">https://onlinecourses.nptel.ac.in/noc21_mg63/preview</a>
3.	Sarasvathy's principles for effectuation <a href="https://innovationenglish.sites.ku.dk/model/sarasvathy-effectuation/">https://innovationenglish.sites.ku.dk/model/sarasvathy-effectuation/</a>

**List of Experiments.**

The lab activities are to be conducted in a group. One group can be formed with 4-5 students. A group has to develop a Business Model Canvas and a digital prototype (Web App/ mobile app). Weekly activities are to be conducted as follows:

Sr No	Lab activities	Hrs
01	Problem identification (Pain points, Market survey)	2
02	Design a digital solution for the problem (Ideation techniques)	2
03	Preparing a business model canvas: Value proposition, Key partners, Key resources, Key activities	2
04	Preparing a business model canvas: Customer segment, Customer relationships and channels	2
05	Preparing a business model canvas: Cost and Revenue structure	2
06	Prototype development: Low fidelity	2
07	Prototype development: Customer feedback	2
08	Prototype development: High fidelity	2
09	Presentation of high-fidelity prototype	2

Sr No	List of Assignments / Tutorials	Hrs
01	Presentation on case study of a failed business model	2
02	Presentation on case study of a woman entrepreneur	2

**Assessment:**

**Term Work:** Term Work shall consist of 10 lab activities based on the above list. Also, Term work journal must include any 2 assignments from the above list.

**Term Work Marks:** 50 Marks (Total marks) = 25 Marks (Experiment) + 10 Marks (Assignments) + 5 Marks (Attendance)+10 Marks (Report).

Course Code	Course Name	Teaching Scheme (Contact Hours)			Credits Assigned			
		Theory	Pract.	Tut.	Theory	Pract.	Tut.	Total
2994512	Design Thinking	-	2*+2	-	-	2*+2	-	2

Course Code	Course Name	Theory					Term work	Pract / Oral	Total
		Internal Assessment			End Sem Exam	Exam Duration (in Hrs)			
		Test 1	Test 2	Total					
2994512	Design Thinking	--	--	--	--	--	50	--	50

**Note:** \* Two hours of practical class to be conducted for full class as demo/discussion/theory.

### Lab Objectives:

1. To introduce a learner to the principles of Design Thinking.
2. To familiarize a learner with the process (stages) of Design Thinking.
3. To introduce various design thinking tools.
4. Study of the techniques for generation of solutions for a problem.
5. To expose a learner to various case studies of Design Thinking.
6. Create and test a prototype.

### Lab Outcomes:

Students will be able to ...

1. Compare traditional approach to problem solving with the Design Thinking approach and discuss the principles of Design Thinking
2. Define a user persona using empathy techniques
3. Frame a problem statement using various Design Thinking tools
4. Use ideation techniques to generate a pool of solutions for a problem
5. Create prototypes using different techniques
6. Test the prototypes and gather feedback for refining the prototype

### DETAILED SYLLABUS:

Module	Course Module / Contents		Hours	CO Mapping
1	Introduction to Design Thinking		05	LO1, LO2
	1.1	Definition, Comparison of Design Thinking and traditional problem-solving approach.		
	1.2	Need for Design Thinking approach, Key tenets of Design Thinking, 5 stages of Design Thinking (Empathize, Define, Ideate, Prototype, Test)		
	Self-learning Topics: Design thinking case studies from various domains <a href="https://www.design-thinking-association.org/explore-design-thinking-topics/external-links/design-thinking-case-study-index">https://www.design-thinking-association.org/explore-design-thinking-topics/external-links/design-thinking-case-study-index</a>			

2	<b>Empathy</b>		05	LO2, LO3
	2.1	Foundation of empathy, Purpose of empathy, Observation for empathy, User observation technique, Creation of empathy map.		
	<b>Self-learning Topics:</b> Creation of empathy maps <a href="https://www.interaction-design.org/literature/topics/empathy-mapping">https://www.interaction-design.org/literature/topics/empathy-mapping</a>			
3	<b>Define</b>		05	LO2, LO3
	3.1	Significance of defining a problem, Rules of prioritizing problem solving.		
	3.2	Conditions for robust problem framing, Problem statement and POV.		
	<b>Self-learning Topics:</b> Creating a Persona – A step-by-step guide with tips and examples <a href="https://uxpressia.com/blog/how-to-create-persona-guide-examples">https://uxpressia.com/blog/how-to-create-persona-guide-examples</a>			
4	<b>Ideate</b>		05	LO3
	4.1	What is ideation? Need for ideation, Ideation techniques, Guidelines for ideation		
	4.2	Multi-disciplinary approach, Imitating with grace, Breaking patterns, Challenging assumptions		
	4.3	Looking across value chain, Looking beyond recommendation, Techniques for ideation: Brainstorming, Mind mapping		
	<b>Self-learning Topics:</b> How To Run an Effective Ideation Workshop: A Step-By-Step Guide <a href="https://uxplanet.org/how-to-run-an-effective-ideation-workshop-a-step-by-step-guide-d520e41b1b96">https://uxplanet.org/how-to-run-an-effective-ideation-workshop-a-step-by-step-guide-d520e41b1b96</a>			
5	<b>Prototype</b>		03	LO6
	5.1	Low and high-fidelity prototypes, Paper prototype, Story board prototype, Scenario prototype		
6	<b>Test</b>		03	LO4, LO5
	6.1	5 guidelines of conducting test, The end goals of test: Desirability, Feasibility and Viability, Usability testing		

#### Textbooks:

3.	Design Thinking and Innovation by Ravi Poovaiah <a href="https://onlinecourses.swayam2.ac.in/aic23_ge17/preview">https://onlinecourses.swayam2.ac.in/aic23_ge17/preview</a>
4.	Introduction to Design Thinking by Dr. Rajeshwari Patil, Dr. Manisha Shukla, Dr. Deepali Raheja, Dr. Mansi Kapoor <a href="https://onlinecourses.swayam2.ac.in/imb24_mg37/preview">https://onlinecourses.swayam2.ac.in/imb24_mg37/preview</a>
3.	Usability Testing <a href="https://www.interaction-design.org/literature/topics/usability-testing">https://www.interaction-design.org/literature/topics/usability-testing</a>

**List of Experiments.**

The experiments are to be performed in groups. A practical batch may be divided into groups of 4-5 students.

Sr No	List of Experiments	Hrs
01	Customer Journey Mapping: Visualize the steps users take to interact with a product or service. Map out the customer journey from discovering a product to making a purchase and using the product. Identify pain points and opportunities for improvement.	2
02	Stakeholder mapping: Identify all relevant stakeholders in a project. Create a stakeholder map, categorizing stakeholders based on their influence and interest. Include management of relationships with key stakeholders.	2
03	"How Might We" Problem Framing: Transform user insights into actionable problem statements. After empathizing with users, turn challenges into "How Might We" statements that define the problem without prescribing a solution.	2
04	Brainstorming Session: Generate a pool of ideas in a creative, non-judgmental environment. Using ideation techniques like mind mapping and brainwriting, students brainstorm as many solutions as possible to their "How Might We" problem statements.	2
05	Affinity Diagramming: Organize group ideas to find patterns and insights. After brainstorming, students will categorize their ideas into themes by placing sticky notes on a wall and moving them into groups based on similarities.	2
06	Rapid Prototyping: Create quick, low-fidelity versions of solutions. Use materials like paper, cardboard, and markers to build a prototype of their solution within 30 minutes. The focus is on speed and functionality, not aesthetics.	2
07	Wireframing: Create a visual guide for digital interfaces for mobile app / web app for the problems identified in earlier lab sessions. Students will sketch wireframes of the user interface for their product or service. Use tools like Balsamiq or paper and pen for low-fidelity wireframes.	2
08	Role-Playing: Walk through a prototype from the user's perspective. Students act as both users and designers, role-playing scenarios where they interact with their prototype (Developed in earlier lab sessions). Gather feedback from participants on how to improve the experience.	2
09	Usability Testing: Evaluation of the effectiveness and user-friendliness of a prototype (developed in earlier lab sessions). Students will have peers or target users test their prototypes, observe how they interact with it, and collect feedback on any issues or improvements needed.	2
10	Feedback Loop and Iteration: Refine solutions based on user feedback. After usability testing, students will refine their prototypes. Document changes made based on feedback and discuss how continuous iteration improves the design.	2

Sr No	List of Assignments (Any two)	Hrs
01	Create an empathy map for a target user group. Break them into four sections: <i>Says, Thinks, Feels, and Does</i> . Interview users or research their experiences to fill in the map.	3
02	Based on research, students will create user personas including demographic details, motivations, pain points, and goals. Each group will present their persona to the class.	3
03	Consider 3 examples of real-life products which have good design and bad design. Write down reasons why do you think they are good or bad designs. May take user survey to support your work.	3
04	Study any open-source design thinking tool and write a brief report about it.	3

**Assessment:**

**Term Work:** Term Work shall consist of 08 to 10 lab activities based on the above list. Also, Term work journal must include any 2 to 4 assignments from the above list.

**Term Work Marks:** 50 Marks (Total marks) = 25 Marks (Experiment) + 10 Marks (Assignments) + 5 Marks (Attendance)+ 10 Marks (Report).

**Letter Grades and Grade Points:**

<b>Semester GPA/ Programme CGPA Semester/ Programme</b>	<b>% of Marks</b>	<b>Alpha-Sign/ Letter Grade Result</b>	<b>Grading Point</b>
9.00 - 10.00	90.0 – 100	O (Outstanding)	10
8.00 - < 9.00	80.0 - < 90.0	A+ (Excellent)	9
7.00 - < 8.00	70.0 - < 80.0	A (Very Good)	8
6.00 - < 7.00	60.0 - < 70.0	B+ (Good)	7
5.50 - < 6.00	55.0 - < 60.0	B (Above Average)	6
5.00 - < 5.50	50.0 - < 55.0	C (Average)	5
4.00 - < 5.00	40.0 - < 50.0	P (Pass)	4
Below 4.00	Below 40.0	F (Fail)	0
Ab (Absent)	-	Ab (Absent)	0
